MATERIAL SAFETY DATA SHEET REQUEST LETTER

(Manufacturer's Name)
 (Manufacturer's Address)
 (Manufacturer's City, State and Zip Code)

(Date)

To Whom It May Concern:

On (date shipment was received), we received a shipment of (type of material received), stock number (items stock number) and did not receive a material safety data sheet (MSDS). Under the Occupational Safety and Health Administration Hazard Communication Standard 29 CFR 1926.59 (29CFR 1910.1200), we are required to obtain and maintain MSDSs for all hazardous substances used in our organization.

Please send the MSDS to the following address:

(Company Name)
 (Company Address)
 (Company City, State and Zip Code)
 Attn: (Name & Title)

Please consider this a standing request to your company to supply us with any information concerning the safety and health aspects of this product that may become known in the future.

Thank you for your timely response to this request. If you have any questions, please call (telephone number).

Sincerely,
 (Company Name)

(g) Safety Data Sheet Format

- | | |
|--|---|
| 1. Identification of the substance or mixture and of the supplier
2. Hazards identification
3. Composition/information on ingredients
4. First-aid measures
5. Fire-fighting measures
6. Accidental release measures
7. Handling and storage
8. Exposure controls/personal protection | 9. Physical and chemical properties
10. Stability and reactivity
11. Toxicological information
12. Ecological information (non-mandatory)
13. Disposal considerations (non-mandatory)
14. Transport information (non-mandatory)
15. Regulatory information (non-mandatory)
16. Other information, including date of preparation or last revision |
|--|---|

Safety Data Sheet
According to OSHA Hazard Communication Standard, 29 CFR 1910.1200
Effective date: 01.11.2016
Super Sap CLR Epoxy Resin

SECTION 1: Identification

Material name: Super Sap CLR Epoxy Resin
 Trade Name: Super Sap CLR Epoxy Resin
 Product code: 11.CCR
 Recommended use of the product and restriction on use:
 Modified liquid epoxy resin.

Manufacturer or supplier details

Manufacturer: Entropy Resins, Inc.
 3003 S. Alvarado St.
 Hayward, CA 94544 USA
 1-310-882-2120
 info@entropyresins.com

Supplier: Entropy Resins / Middle East
 Ferter-Dalmatia
 Rosalia de Castro 21
 33432 Gijon, Spain
 +34 93 487 40 12
 info@entropyresins.eu

Emergency telephone number:
3E Company
 Inside USA: 1-760-476-3962
 International / not specified: 1-760-476-3962
National Chemical Emergency Helpline
 Inside China: +86-0352-8386-9090

SECTION 2: Hazard(s) identification

GHS Classification:
 Skin irritation, Category 2.
 Eye irritation, Category 2A.
 Skin sensitization, category 1.
 Chronic aquatic hazard, category 2.

Label elements

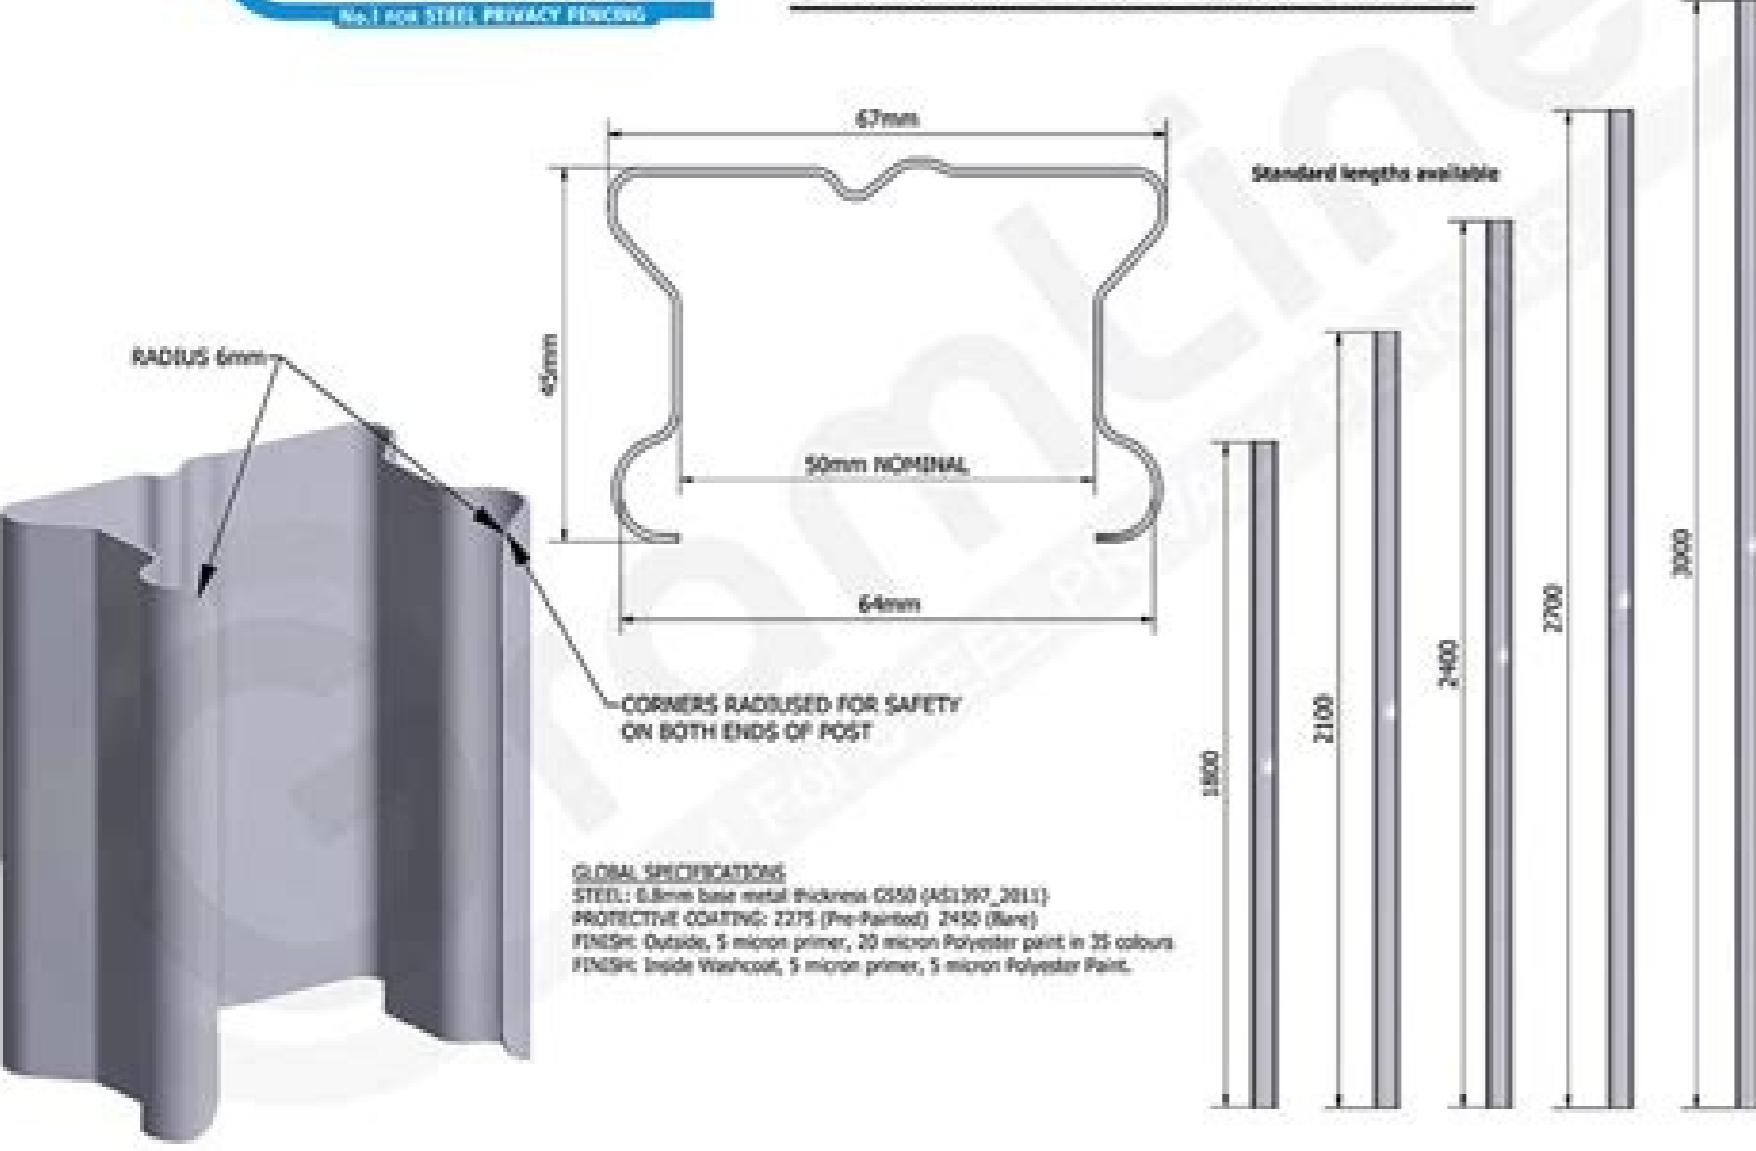

Hazard pictograms: !, L

Signal word: Warning

Hazard statements:
 H315 Causes skin irritation.
 H317 Causes an allergic skin reaction.
 H319 Causes serious eye irritation.
 H411 Toxic to aquatic life with long lasting effects.

Precautory statements:
 P261 Avoid breathing dust/fume/gas/mist/vapors/spray.
 P264 Wash skin thoroughly after handling.

Does osha require msds sheets. Msds sheets examples. Who prepares msds sheets.

When a dangerous chemical is purchased, the supplier must send SDS information. By this reason, one should not assume that safety data sheets are necessarily interchangeable between paises or products. "Stay of risk communication: safety data sheets." While drivers are technically responsible for handling hazardous materials in the same way, someone is injured by hazardous materials at work, the first respondent that manages first aid needs to understand what is trying to offer adequate attention. Hazardous materials must have MSD leaves that accompany workers, administration, transporters and security personnel to be used to stay safe. Protection of important workers for an MSDs is to protect the health of workers who have to use potentially dangerous chemical products and articles at work. Dashpivot is a favored security management software to use with confidence by industries in all types of jobs and projects. While this can be printed, they are often available in line. The information in danger of a mixture tends not to be the same as the dangers raised by the individual components! Janelle, Donald G, Beuthe, Michel (1997). The United States adopted the safety data sheet to replace the material safety data sheet in 2012. The MSDS format is considered an older data sheet style. Some products with identical names and sold by the same company may have different formulations, depending on the country. Companies that supply dangerous chemical products generally use a service that writes and updates the data sheets. The University of California organizes the SDS Google. The document can also be called a safety data sheet (SDS) or a Product safety data (PSDS). The symptoms also tell the workers to do in case of spill or accidental exhibition to hazardous materials, dangerous. Use MSDSMANAGERS use MSDSS to determine what types of PPE workers they should be available when they work with a specific dangerous product or product. "Globalization and research problems in transport." Journal of Transport Geography. Note that some formulations are mixtures instead of pure chemical products. Consult the template. People in more than 70 pairs use this security management system to optimize and simplify security. Previous view of the full template edit or add data sheets with simple functionality to drag and release. Download, print or instantly send your data sheets such as Excel documents or PDF Personalized brand. The SDS is not appreciably different from the MSDs, but the information is presented consistently and is internationally standardized. This is for users to find relevant data and easily. Current MSD documents contain physical and chemical property information, potential danger information, protection measures, storage and transport precautions, emergency procedures that include how to handle spills or accidental exposure, elimination recommendations and manufacturer information information. This can affect the purchasing department, because supplies must be ordered and available before workers use the item. Keep the most sure site by making your report procedure close to Miss safe and rationalized. The MSDS or SDS for a chemical mixture, composed or points to workers who deal with a substance in an occupational environment or those who need to transport/store a chemical or deal with accidents. Elsevier Science Ltd. Administration of Occupational Health and Safety of the United States. This is a 16-section format, in English, which contains the following facts in the specified order: Section 1: Identification of the substance/mixing and the company/company 1. Product identifier 1.2. Relevant identified uses of the substance or mixture and the uses advised against 1.3. Details of the Safety Data Sheet 1.4. 1.4. Number of substances 2. Risk identification 2.1. Substance classification or mixture 2.2. Tag elements 2.3. Other risks Section 3: Composition/Information on Ingredients 3.1. Substances 3.2. Mixtures Section 4: First aid measures 4.1. Description of first aid measures 4.2. The most important symptoms and effects, both acute and delayed 4.3. Indication of any immediate medical attention and special treatment necessary section 5: Fire extinguishing measures 5.1. Extinction media 5.2. Special hazards that arise from the substance or mixture 5.3. Board of Firefighters Section 6: Accidental release measure 6.1. Personal precautions, protection equipment and emergency procedures 6.2. Environmental precautions 6.3. All all and material for containment and cleaning 6.4. Reference to other sections Section 7: Management and storage 7.1. Precautions for safe handling 7.2. Conditions for safe storage, including any incompatibility 7.3. SPECIFIC FINAL USE (s) Section 8: Exposition controls/personal protection 8.1. Control parameters 8.2. Exhibition controls Section 9: physical and chemical properties 9.1. Information on physical and chemical basic properties 9.2. Another information section 10: stability and reactivity 10.1. Reactivity 10.2. Chemical stability 10.3. Possibility of dangerous reactions 10.4. Conditions to avoid 10.5. Incompatible materials 10.6. Dangerous Decomposition Products Section 11: Toxicological information 11.1. INFORMATION ON TOXICOLOGICAL EFFECTS Section 12: ECOLOGICAL INFORMATION 12.1. Toxicity 12.2. Persistence and degradability 12.3. BIOACUMULATIVE POTENTIAL 12.4. Soil mobility 12.5. Results of the PBT and VVB evaluation 12.6. Other adverse effects Section 13: Elimination considerations 13.1. All of waste treatment 14: of transport 14.1. UN number 14.2. Adequate Env 14.3 shipment name. Transport risk class (s) 14.4. Packaging Group 14.5. Environmental Dangers 14.6. Special precautions for user user Bulk transportation according to Annex II of Marpol73/78 and the IBC section 15: Regulatory information 15.1. Safety, health and environmental regulations/specific legislation for substance or mixture 15.2. QUÉMICA SECURITY EVALUATION Section 16: Another information 16.2. Last revision date of the SDS in the United States, the Occupational Health and Safety Administration (OSHA) requires that employers put available to all employees who handle potentially dangerous substances. Use this SDS template to make an SDS compatible with GHS. An SDS follows the classification system and globally harmonized labeling of chemical products. By this reason, the data sheet may not be very easily by a secular person. Similarly, generic products can vary in the composition of brand products. The information provided in an MSDS allows environmental control agencies to know how serious the risk of spill is, and the leaves can help these organizations to determine what to do to clean the chemical spilled safely. MSDS is a previous format that must be replaced by SDS, which is an internationally standardized security data sheet. An MSDS offers information about first aid tasks, such as rinse with the eyes with water or keep the water away from the affected number, depending on the material involved. The MSDS leaves contain basically the same information as SDS, but the language and the organization of information can be different. However, both MSDS and SDS are data sheets that describe the properties and dangers of a chemical, and use the symbols of the European union for hazards. If you synthesize a dangerous chemical, the PI or the manager must generate a label compatible with the globally harmonized system (GHS) and the safety data sheet (SDS) to send or transport the chemical away from the campus. If you do not have a data sheet for a chemical, you can look for it in line. The number CAS is a unique identifier by the American Chemical Society and is used internationally. An MSDS is a written document that describes information and procedures to handle and work with chemical products. It impacts the way in which work trainers show workers how to perform tasks, and guarantees that managers understand the severity of a situation in case of spill or a worker who comes into contact with the dangerous material when he does not use the protection equipment suitable. MSDSS by transport and road drivers must have access to MSDS in case the chemical products are spilled in tron and need to be cleaned or the vehicle is involved in an accident. Companies maintain the MSDS that workers should be read, according to the Occupational Health and Safety Administration, or Osha. MSDS means material safety data sheet. See the Verify the MSD after exposition to chemical products helps the first to respond to apply adequate first aid measures. Environmental cleaning agencies are also used after a chemical spill in order to clean the exposure and reduce the environmental impact. Material safety data sheets (MSDS) list the potential hazards associated with chemical products and other products, and tell users and security personnel how to work safely around those articles. In addition, SDSS must be available for local firefighters departments, local emergency planning officials and state planning officials. The MSDS tells the workers that risks are associated with the chemical products and describe how workers can protect themselves with equipment from Personal or PPE. More questions from Uswered.net MSDS is an acronym for the material safety data sheet. Formate the material safety data sheets completed in the list view or the registration view with the click of a botom. The best way to look for a chemical is for its registration of chemical resumes
