However, not all project management software is created equal. For those looking to use an affordable, flexible and powerful tool, look no further. ProjectManager is award-winning project and portfolio management software with robust Gantt charts, kanban boards, task lists and calendars to give the team the tools they need to do their jobs while managers track that work in real time. Balance Team Workload for Greater Productivity Project managers have to schedule resources to ensure that what they need for their projects is there when they need it. Gantt charts schedule human and nonhuman resources and their costs to help keep to the budget. When onboarding teams, managers can set their availability, including PTO, vacation and global holidays and even skills. This helps streamline the assigning process. Once teams have tasks, toggle over to the team page or color-coded workload chart to see who is overallocated or underutilized. Then balance the team workload right from those pages to keep everyone working at capacity without threatening burnout. Monitor Progress, Costs and More in Real Time Project managers need to deliver projects on time, within budget and keeping quality standards. This is impossible without tools to monitor and track the project in real time. Once a baseline has been set on the Gantt chart, every time a team member logs hours or updates their tasks, it reflects throughout the software in real time. For a high-level overview, the project or portfolio dashboard has easy-to-read graphs and charts collecting key performance indicators (KPIs) such as time, cost, workload and more. Customizable reports go deeper into the data, which can be filtered and shared with stakeholders to keep them informed. Secure timesheets help track labor costs, too, which is necessary to stay on budget. Project Manager Resume Example Downloads in PDF Potential employers love numbers because it makes your experience feel more tangible. When writing your resume, if you can answer the questions, "How much?" or "How many?", you should include that number in your resume. For instance: How long did the project last? How big was the project team? What was the project budget? No matter how long you have been working in project management, there are a few key things that employers need to know to make sure you are a good fit for their team. The first thing to highlight is the types of projects you have overseen. Examples would be infrastructure projects, software development projects, construction projects, or relocation projects. The types of projects you have worked on needs to be included both in summary at the top of your resume, as well as within each position description. Next, employers want to see the range of budgets you have experience overseeing. There is a big difference between \$5k projects and \$1.5M projects. Again, this information should be in your summary, as well as your position descriptions. Lastly, employers want to know how long your projects have lasted, and if you are comfortable juggling multiple projects simultaneously. Along with the budget, also give a timeline of the shortest and the most extended project you have worked on in your summary. This means your summary should look something like "Managing infrastructure projects lasting anywhere from 6 months to 2 years and with budgets ranging from \$5k to \$1M".
