TitleResults for "How to create a CRO?" Also available in Once PI servers, data server, Web API, random interface and PI points are configured you can use PI Web API to retrieve and update point attributes and values from PI server. The Web API provides REST interface to interact with PI server over the web. The following table describes some of the common endpoints used to retrieve PI point information. Note that each points and assets in PI server is identified using a unique webId. Description Web API URL PI Web API home page :port/piwebapi/ Get attributes of all PI points using POST method POST: /port/piwebapi/batch Body: { "method": "GET", "Resource": "port/piwebapi/points/multiple?webId=Point1.webId&webId=Point2.webId" } Get data values of multiple specified PI points using POST method POST: /port/piwebapi/batch Body: { "method": "GET", "Resource": "port/piwebapi/streams/values?webId=Point1.webId&webId=Point2.webId" } } Sorry to interruptCSS Error find out in the latest ARC report, why a hybrid data infrastructure is the key to future success and best practices for your data management strategy. Read the report AVEVA PI system is an integrated portfolio of solutions that enables industrial operations to collect, cleanse, store, enrich and visualize real-time operational data—all with full IT compliance. AVEVA PI System makes it easier for operators, plant managers, data analysts and executives to optimize efficiency, ensure resilience and drive sustainability. 25 of the top 25 plasma companies use AVEVA PI System 1000+ power utilities use AVEVA PI System 75% of the world's crude oil, natural gas, and liquids are produced with AVEVA PI System 9 of the top 10 mining companies use AVEVA PI System Collect and store real-time data from your operating assets with sub-second granularity. Easily create dynamic data visualizations and asset frameworks to view data in context. Deliver trustworthy data to remote users, applications, business intelligence, analytics and AI tools. In industrial operations, critical assets with intermittent connectivity generate vast volumes of high-fidelity data. AVEVA PI System solutions overcome the challenges of industrial data management to provide highly reliable collection, contextualization, storage, and visualization, enabling users in operations and beyond to make data-driven decisions. AVEVA offers hundreds of data connectivity options for nearly all industry and vendor-specific protocols. Automatically capture high-volume data streams in real-time from on-premises and cloud-based sources. AVEVA PI System provides a secure, scalable, and resilient data platform that can be configured to meet your specific needs. AVEVA PI System is designed to be flexible and scalable, allowing you to configure your data management solution for high availability, automatic failover and auto-discovery of new data sources. Configure reusable asset models, events and analytics based on multiple data streams and conditions without programming. Use integrated, self-service visualization tools that make it easy for users in operations or other functions to identify, access and use the data they need. Build web and mobile accessible data displays. With integrated edge, on-prem and cloud components, you can put data storage and processing where it's most efficient and scale as needed. Feed edge data directly to field engineers. Manage critical operations data on-prem in protected environments. Aggregate data from multiple sites in the cloud to support enterprise analysis. Reduce the data preparation burden with solutions for fast, secure transfer of real-time operations data into commonly used analysis and business intelligence tools. In addition to pre-built integrators, you can access data programmatically using our open APIs, SDK and message format. To turn data into operational insights that drive sustainability, you need a flexible data management platform. AVEVA PI System solutions help you establish an operations monitoring baseline, visualize critical asset and process performance, develop actionable insight, and apply advanced, AI-based analytics to achieve measurable outcomes. For customers across industries, AVEVA PI System plays a critical role in helping them shift to renewable energy, minimize resource consumption, reduce emissions, improve circularity and safety, extend asset life and automate compliance reporting. AVEVA PI System empowers TotalEnergies to monitor, calculate, and identify opportunities to mitigate emissions across its global operations.
